SUMMARY

Back-end-focused .NET developer building REST APIs with C#, ASP.NET Core, Entity Framework Core, and SQL Server, with Angular front-end experience. Delivered business workflows across 6+ ERP modules at XeoTech and back-end features for an e-commerce and mobile platform at SoulTech. Experienced with JWT authentication, role-based access control (RBAC), SignalR, and query optimization that reduced API response times by 15-20%.

TECHNICAL SKILLS

- **Languages:** C#, SQL, T-SQL, TypeScript, JavaScript (ES6+), PHP
- **Back-End:** .NET / .NET Core, ASP.NET Core Web API, ASP.NET Core MVC, RESTful API Development, Entity Framework Core (EF Core), LINQ, Dapper, SignalR, CQRS, MediatR, Middleware, Dependency Injection, AutoMapper
- **Security:** Authentication and Authorization, JWT Authentication, Role-Based Access Control (RBAC)
- **Front-End:** Angular, HTML5, CSS3, Bootstrap
- **Databases:** SQL Server, Stored Procedures, MySQL, Indexing, Query Optimization
- **Messaging and Caching:** RabbitMQ, Redis
- **Architecture and Practices:** Object-Oriented Programming (OOP), Clean Architecture, SOLID Principles, Design Patterns, Repository Pattern, Unit of Work
- **Testing and DevOps:** Unit Testing (xUnit), Postman, Swagger (OpenAPI), Git, GitHub, Docker, GitHub Actions, CI/CD
- **Methodologies and Other:** Agile, Scrum (2-week sprints), Laravel, Eloquent ORM

PROFESSIONAL EXPERIENCE

Back-End / Full-Stack Developer | XeoTech | Part-time | Mar 2026 - Aug 2026

- Contributed to XeoTech ERP, a modular platform spanning Accounting, HR and Payroll, Sales and CRM, Purchasing, Inventory, Manufacturing, Projects, Treasury, Tax, Workflow, and Reports/BI.
- Implemented core business workflows in C# and .NET across 6+ ERP modules, including invoicing, purchase orders, goods receipts, stock movements, payroll, manufacturing orders, payments, and approval flows.
- Applied business rules and validation to keep data consistent across related modules.
- Applied CQRS with MediatR to separate command and query handling in ERP business workflows.
- Worked with Stored Procedures and T-SQL in SQL Server, and with Redis (caching) and RabbitMQ (messaging), in the ERP back end.
- Built maintainable .NET APIs and developed front-end interactions in Vanilla JavaScript.

Back-End Developer | SoulTech | Full-time | Oct 2025 - Feb 2026

- Developed ASP.NET Core Web APIs for an e-commerce platform and mobile applications, covering payments, order processing, and push notifications.
- Reduced API response time by about 20% through Entity Framework Core query optimization and SQL Server indexing.
- Implemented JWT authentication and role-based access control (RBAC).
- Worked with mobile and front-end teams in an Agile environment using 2-week sprints.

PROJECTS

Multi-Vendor E-Commerce Platform | Angular, ASP.NET Core, SQL Server

- Built 48 ASP.NET Core REST API endpoints for a multi-vendor platform, reducing latency by 15% through SQL indexing and optimized EF Core queries.
- Designed JWT-based RBAC for Admin, Vendor, Customer, and Customer Service roles.
- Integrated SignalR for real-time notifications, improving user response time by 25%.
- Delivered the Angular front end as part of a cross-functional Agile team.

Real Estate Platform | ASP.NET Core, EF Core, Clean Architecture | Freelance

- Designed a modular back end using Clean Architecture and SOLID principles.
- Implemented role-specific portals (Admin, Vendor/Agent, End User) with JWT authorization and separate business workflows.
- Built multi-criteria search APIs (location, price, property features) using optimized LINQ queries and AutoMapper DTOs.

- Implemented listing workflows, including admin status approvals, vendor listing controls, and media storage integration.
- Applied the Repository and Unit of Work patterns with EF Core to keep database transactions safe and consistent.

Employees Management System | Laravel, MySQL, REST API

- Built RESTful APIs in Laravel for employee profiles, daily attendance logs, leave management, and payroll calculations.
- Secured the system with Laravel Sanctum / JWT authentication and custom middleware for role-based access control (RBAC) across HR admins, managers, and staff.
- Structured the MySQL relationships behind the HR data and optimized Eloquent ORM queries.

EDUCATION

Bachelor of Commerce (B.Com), English Section | Helwan University, Cairo | Aug 2019 - Jul 2023

CERTIFICATIONS

- Back-End Developer (.NET) Training, EraaSoft, 2024
- Laravel Developer Certificate, Pioneers, 2024
- Postman API Fundamentals Student Expert, Postman, 2024
- Microsoft Learn Pathways: SQL Server and Azure SQL Modules
